

THE AI-NATIVE Operational Intelligence Platform

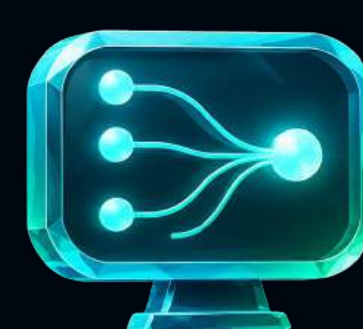

Transform Your IT Operations MindOps is an AI-native observability platform that unifies metrics, logs, and traces into one layer, with Mindy — an agentic AI SRE — pinpointing root cause via hybrid vector-graph correlation and ML anomaly detection. Available as a full platform or as a module extending your existing APM, and deployable on-prem, cloud, or fully air-gapped, keeping all processing and AI inference inside your network.

Core Differentiators

Agentic AI, Not Just Alerts

Mindy investigates and acts — root cause in under 10 minutes.

Unified Observability

Infra, logs, metrics, traces in one screen, 90%+ noise reduction.

Modular by Design

Start with Mindy alone, or add modules as needed

The Transformation

	BEFORE MINDOPS	AFTER MINDOPS
Visibility	• Fragmented	→ Single command center
MTTR	• Hours, manual	→ Minutes, guided
Root Cause	• Guesswork	→ Automated root cause

Mindy — our agentic AI — investigates and acts instead of just alerting, and can even run as a full APM on its own (Pure APM mode), or as SRE Agent, Log Analyzer, or Infra Monitoring

MindOps Feature

01

Unified Observability

Meets SOC2 and ISO27001 standards with TLS encryption, granular RBAC, and audit logging for secure communication.

02

Flexible Deployment

Deploy anywhere: On-Premise, Cloud, or Air-Gapped, adapting to your infrastructure and compliance requirements.

03

Meet Mindy, Our Agentic AI

Real-time, interactive BI dashboard highlighting MTTR trends, incident patterns, and SLO performance, for engineers and leadership alike.

04

The Result: Reactive to Proactive

Human-in-the-loop approval workflow for every high-risk remediation action — the speed of automation with full accountability.

Flexible Plans for Every Organization

Mindy, SRE Agent

Log Analyzer

Infra Monitoring

App Observability

Full Unified Bundle

LICENSING

- Perpetual
- Subscription
- Annual Support

SLA

- 8×5
- 24×7

Deployment

- On Premise
- Cloud
- Air-Gapped
