

MindSOC

AI-Powered SOC Automation Platform

Investigation Timeline

**Classify** 08:58:06

Escalate the brute_force alert with high severity.

**Investigate** 09:01:32

Searched knowledge base for brute_force patterns. Found 3 matching articles.

**Enrich** 09:04:18

Enriched 2 entities via visual and threat intel connectors.

**Synthesis** 09:07:45

Investigation determined this as a genuine security incident. The brute force activity from source 'Wazuh' was validated through multi-source enrichment. Recommended immediate response actions have been generated.

Recommended Actions

 Block source IP firewall

 Force password resets on compromised accounts

 Enable account lockout policy

Faster Response

Reduces MTTR by 87% with autonomous investigations in under 3 minutes.

Higher Accuracy

Delivers 95–99% verdict accuracy and auto-closes 90%+ false positives.

Enterprise-Ready

Runs securely on-premise/VPC with RBAC, audit logging, and SOC2 compliance preparation.

Transform Your Security Operations MindSOC unifies alerts across SIEM, EDR, ITSM, Threat Intel, and Identity providers, applying AI-driven correlation and root-cause analysis. It autonomously investigates incidents through a five-stage pipeline, delivering complete verdicts directly into ticketing systems. By reducing alert fatigue and accelerating decision-making, MindSOC empowers SOC teams to respond faster, more accurately, and with full governance.

Uncompromising Control and Compliance

MindSOC runs securely inside your infrastructure, supporting VPC, on-premise, and air-gapped deployments. All data remains within your network boundary to meet strict compliance requirements.

MindSOC Features

Unified Incident Mangement

Bring every alert from your SIEM, EDR, ITSM, Threat Intel, and Identity tools into a single dashboard — no more switching between consoles to investigate.

AI SOC Analyst

Ask questions in plain language and get instant answers. Your AI assistant explains verdicts, surfaces context, and helps analysts investigate faster.

Threat Hunter Agent

A proactive AI agent that hunts for threats before they strike — simulating attacks and surfacing hidden risks ahead of any incident.

Investigation Graph

Visualize how incidents, endpoints, and users connect. Trace root cause across your entire environment in one interactive graph.

Flexible Plans for Every Organization

Available in Essential, Premium, and Enterprise tiers, suited for SOC teams from small groups to MSSPs. Deployment spans Docker Compose to Kubernetes clusters, with add-ons like GPU acceleration, extended retention, compliance support, and 24/7 assistance.
